SHORT COURSE ON
ECONOMIC EVALUATION
Cost-Effectiveness and Cost Benefit Analysis in Health Care

Course Fee: BDT 9,000

28-29-30 January 2024
9:00 am - 5:00 pm

ABOUT THE COURSE

Conducting economic evaluation is an essential exercise for making recommendations to policy makers. It is required for efficient utilization of limited health care resources that maximize health benefits. Such an exercise is also vital for assisting the policy makers, health care programs, and service managers. It also plays a key role in the assessment of new health technologies that can provide us with “value for money information”.

To achieve Universal Health Coverage (UHC), we need to ensure cost-effective health care services that provide improved health outcomes for our population. For this purpose, we need to ensure efficient allocation and utilization of health care resources by designing a well-defined cost-effective health care benefits package. In order to accomplish this in a low and middle-income country like Bangladesh, the key element is to develop the capacity for understanding and commissioning cost-effectiveness and cost-benefit analysis and their critical assessments. This short course is designed to teach on how to conduct the cost-effectiveness and cost-benefit analysis with hands on training incorporating the practical exercises with examples.

DURING THE COURSE YOU WILL LEARN

- Fundamentals and principles of economic evaluation
- Cost-effectiveness and cost-benefit analysis with examples
- Cost calculation (i.e., marginal vs. average costs, type of costs, how to value costs, how to discount future costs, how to deal with uncertainty around these estimates) and Cost analysis
- Fundamental methods for measuring health related quality of life (QALYs), disability adjusted life years (DALYs) and other measures of health outcome
- Benefit calculation (how to monetize benefits, how to discount future benefits, how to calculate Internal Rate Return, Benefit Cost Ratio with their interpretation)

WHO CAN APPLY FOR THIS COURSE?

Health Care and Public Health Professionals, Health Programme Planners and implementers, who want a better understanding of the tools, approaches, and applications of Economic Evaluation in Health Care and Health Technology Assessment, and for anyone with an interest in evaluation and prioritizing the service packages for Universal Health Care. Participants are expected to have a Diploma or Degree in a Health-related field or in Social Sciences or Medicines.

The course will especially benefit Academics & Researchers, Health and Social Care Practitioners and Managers, Public Health Practitioners (Government, Local Authority and Not-for-profit Organizations), Postgraduate Students, and Trial Managers.
